

Facilitating the Transition to High School

The Transition Project is a subproject of Ny GIV, a national initiative in Norway. The focus of this subproject is the systematic monitoring of students with weak academic performance, low motivation and insufficient qualifications. The aim is to strengthen the weakest performing students in reading, writing and mathematics.

The Transition Project is the part of Ny GIV where the focus is on the systematic monitoring of students with weak academic performance and qualifications. Students with the weakest results from primary school are over-represented in statistics on dropout in secondary education. The Transition Project focuses on the weaker ten percent of students during their last year of primary school (the 10th year).

I love Ny GIV <3

student, answering a survey

Participation is voluntary. Students in the target demographic are offered intensive training in Norwegian and mathematics in the spring semester of 10th grade. This intensive training is organized partly in smaller groups where students are taken out of other classes and partly as teaching within class, but with additional teaching resources.

Intense Preparation for High School

In many locations, a summer term with different combinations of summer camps, summer jobs, internships, activities and classes has been offered. Several places present an additional offer of introduction days to high school in the weeks before the regular school year. Intensive training can also be continued after the student has started secondary education. During the three years the Ny GIV project runs, the Transition Project is expanded to include an increasing numbers of schools.
